Experience

Managix Technology

Hyderabad, India (On-site)

Software Engineer I

May 2026 – Present

- Designing an **ERP-synchronized order lifecycle system** for a 60+ store pharmacy chain with webhook-driven state transitions and WebSocket-based live order updates.
- Developing and maintaining React Native mobile applications with Zustand state management and Firebase, handling EAS Build pipelines for Android APK/AAB releases and **OTA updates** via Expo Updates.
- Building NestJS service layers with TypeORM-based data models over MySQL, using normalized schema design, cutting average query response time by **35%** for order and transaction workflows.
- Integrated Stripe for payment processing with a subscription and credit-based consumption system, reducing failed payment rates by **30%** through webhook-based verification and automated refund handling.
- Architected a **centralized SSO service** in NestJS issuing RS256-signed JWTs via shared cookies for unified authentication across 3 web applications.
- Set up **CI/CD pipelines** with GitHub Actions and configured Nginx reverse proxy, cutting deployment time to under 2 minutes per deploy.

Software Development Intern

Dec 2025 – May 2026

- Developed cross-platform mobile applications using React Native, integrating RESTful NestJS APIs with a **modular, layered service architecture** for maintainable and scalable backends.
- Optimized MySQL queries with composite indexing, reducing average query execution time by **45%**, and **Elasticsearch** for full-text & fuzzy search, bringing retrieval latency for **300K+** record datasets down to under **200ms**.

Projects

RideNow - Real-Time Ride Booking System | React.js, Node.js, Express.js, MongoDB, Socket.IO, Google Maps API | github

- Engineered a full-stack ride-booking platform with real-time Socket.IO communication, **4 Google Maps APIs**, and **18+ responsive screens** supporting end-to-end ride lifecycle management across dual user roles.
- Implemented a ride dispatch system with **5 km geospatial queries**, OTP verification, dynamic fare calculation across **3 vehicle types**, atomic ride acceptance and auto-cancellation within **60 seconds**.
- Designed a security-first authentication layer combining JWT HttpOnly cookies with Google OAuth 2.0 via Passport.js, hardened with Helmet.js and rate limiting, along with GPS-based live tracking featuring **debounced 4-second** distance and time recalculations and room-based coordinate streaming via Socket.IO.

PaperMind - AI-Powered PDF Chat with RAG Pipeline | Next.js, LangChain, Express.js, Qdrant, BullMQ, Gemini API | github

- Engineered a full-stack multi-user RAG pipeline using Qdrant and **Gemini Embeddings**, implementing metadata-based document isolation (userId + documentId filters) across **500+** indexed documents with zero cross-user data leakage.
- Architected a scalable asynchronous **PDF ingestion pipeline** using BullMQ and Redis, processing documents up to 50MB with Google OAuth and stateless JWT authentication for a secure multi-user chat experience.

AI Career Pilot - AI-Powered Career Guidance Platform | Next.js, Prisma, NeonDB, Clerk, Gemini API | live

- Built a full-stack AI career platform with an adaptive assessment engine using multi-layered branching logic, generating personalized career paths, skill-gap analysis, and learning roadmaps based on user experience level.

Technical Skills

Programming Languages: Java, TypeScript, JavaScript, Python

Frontend: React.js, Next.js, React Native, Expo, Zustand, Tailwind CSS

Backend: Node.js, Express.js, NestJS, BullMQ, Elasticsearch

Databases: MySQL, PostgreSQL, MongoDB, Redis

Gen AI: Gemini API, Claude SDK, LangChain, RAG, Vector Databases

DevOps: Linux, CI/CD, Docker, Git, GitHub Actions, Nginx, EAS, DigitalOcean

Education

Osmania University - Lords Institute of Engineering and Technology

Bachelor of Engineering in Computer Science (GPA: 8.72 / 10.00)

Nov 2022 – July 2026

Hyderabad, Telangana
